PROFESSIONAL SUMMARY

Data analyst with a computer science background and an applied-AI skill set. MSc candidate in Artificial Intelligence for Business at City University of Hong Kong (QS 52); BSc in Computer Science, GPA 4.1/5. Four internships across business data analysis, quantitative research, and software development. Independently designed and shipped two full-stack data products through Vibe Coding — a data-profiling workbench and a Hong Kong rain-decision app — both live in production. Target roles: Data Analyst / Business Analyst.

EDUCATION

MSc in Artificial Intelligence for Business, City University of Hong Kong (QS 52)

Expected 2027

- Coursework: Generative AI for Business · AI-Enhanced Business Analytics (Excel & Python) · Data Visualization · Business Data Analytics · LLMs & Prompt Engineering

BSc in Computer Science & Technology, Changzhou University (Hua Luogeng College)

2021 – 2025

- Coursework: Data Structures & Algorithms · Database Principles & Applications · Distributed Systems · C Programming · Object-Oriented Programming (Java) · GPA 4.1/5

EXPERIENCE

FESCO Adecco Shanghai · Business Data Analysis Intern

Shanghai | Sep – Dec 2025

- Cleaned ~900 operational records from an AI recruiting assistant (5 clients / 4 platforms / 33 days) and built pivot views of the impression → resume conversion funnel; added conversion metrics that flagged weak job postings.
- Ran the daily-batch screening funnel of a government selective-recruitment program: processed 600+ applications with same-day cut-off, supporting 257 interviews and 90 second-round advances.
- Designed a bat + Excel-formula batch renaming toolchain for resume archiving; completed JLL payroll billing reconciliation.

Hainan Yutai Private Fund · Investment Manager Assistant Intern

Shanghai | Jun – Aug 2025

- Built a rank-based multi-factor scoring model for 651 Jiangsu-listed stocks on JoinQuant (8 factor categories, 3 weighting schemes, industry-diversification constraint); the Top-10 portfolio outperformed the CSI 300 in backtest.
- Backtested CSI 300 / SSE 50 / CSI 1000 index options (2020–2025) with a 5-step pandas pipeline — Covered Call, calendar effect and other strategies kept drawdown below the underlying index every year.
- Replicated the Fama–French three-factor model and ran calendar-spread signal statistics on SSE 50 index futures; presented results at the team capstone.

Ruixin Information Technology · Embedded Software Dev Intern

Shanghai | Dec 2024 – Jan 2025

- Set up an ARM development-board test environment, implemented core functions, and owned later-stage debugging and feature verification.
- Systematized key project parameters and interface specifications into standardized documentation.

Jindian Software · Software Development Intern

Changzhou | Jan – Feb 2024

- Tested a government-platform app: revised feature code, executed API tests, and ran black-box testing on selected modules.

PROJECTS

Data Helper — Data Analysis Workbench · Solo-built with Vibe Coding, Live Sep 2026

- Local data-prep workbench (import → profiling → one-click repair → visualization → export): rules-based engine scores data quality 0–100 and auto-fixes flagged issues, detecting arithmetic-rule violations and dependency conflicts.
- FastAPI + DuckDB + Parquet + Vue3/ECharts; 200k-row chunked streaming ingest, 22 cleaning transforms, 198 pytest passing, MCP support for external AI clients; deployed on CloudBase via Docker.

Weather Helper (Hong Kong) — Rain-Decision PWA · Solo-built with Vibe Coding, Live Sep 2026

- Rain go/no-go decisions for all 57 public tennis courts in Hong Kong, fusing HKO SWIRLS nowcasting, Open-Meteo probabilities, and a 10-year ERA5 climate archive into "go / edge / no-bet" advice; crowdsourced reports double-verify forecast accuracy.
- React 19 / Vite / Tailwind 4 + FastAPI scheduler; Web Push rain alerts, geofenced crowdsourcing; 80 pytest; deployed on Railway via Docker.

VR-Based Adolescent Memory Study · Undergraduate Innovation Program May 2023 – May 2024

- Ran N-Back task sessions in a Unity-built VR experiment, collected participants' EEG data, and performed data cleaning and processing in Python.

SKILLS

Data Analysis: Python (pandas / numpy / matplotlib) · SQL (MySQL with DataGrip) · Data Visualization (Power BI / Tableau)

AI & Development: Vibe Coding (AI-powered development) · IDE-embedded agents (Claude Code) · Prompt Engineering · FastAPI · Git · Hive & Spark (still learning)

Languages & Certifications: Chinese (native) · English (fluent — IELTS 7.0, CET-6 552) · CDA Data Analyst Level I · NCRE Level 3 (Database Technology) · Securities Industry Qualification

Honors: National English Competition for College Students (Category C) — Second Prize ×2 · University Third-Class Scholarship ×2
